### 3 Hazards identification

**Hazardous components:**

in the preparation there must be taken into account that the used concentration is hazardous for the health. Classification Xi, irritant. For this evaluation the concentration limits ( European Chemical Information System ) have been brought in consideration.

For 2-octyl-2H-isothiazool-3-on:

0,05 % ≤ C ≤ 0,25 % Xi; R43

For the mixture of thiazoles, CAS nbr 55965-84-9:

0,0015 % ≤ C ≤ 0,06% Xi; R43

Isopropanol and Butylglycol in concentrates as used the solution is not hazardous.

Benzenesulfonic acid, 4-C10-13-sec-alkylderivates for concentrates, 2<Ph admixture <12,5 the solution is not hazardous.

Carbendazim; based on the limits for products with R-phrases R50 and R50/53 and the LC50 for fish, the EC for daphnia and the IC for algae, according 2006/8/EC, for concentrates lower than 0,25 %, the solution is not hazardous.

Zinc oxide is hazardous for the environment and has to be classified at concentrations higher than 0,25 %, symbol N en R-phrases R50/53.

### Disposal of residue/unused products:

Dispose in accordance with applicable international, national and local laws, ordinances and statutes.

For disposal within the EC, the appropriate code according to the European Waste Catalogue (EWC) should be used.

### Contaminated packaging:

After containers have been emptied as thoroughly as possible (e.g. by pouring, scraping or draining until 'drip-dry'), they can be sent to an appropriate collection point set up within the framework of the existing take-back scheme of the chemical industry.

Containers must be recycled in compliance with national legislation and environmental regulations.

### Waste code number:

The waste code number has to be determined in accordance with the European waste code list of 2000/532/EC
